SILICON HIGH SPEED POWER TRANSISTOR

2SC 2527

September 1979

SILICON NPN RING EMITTER TRANSISTOR (RET)

The 2SC 2527 is silicon NPN general purpose, high power switching transistors fabricated with Fujitsu's unique Ring Emitter Transistor (RET) technology. RET devices are constructed with multiple emitters connected through diffused ballast resistors which provide uniform current density. This structure permits the design of high power transistors with exceptional switching characteristics and frequency response in high current applications.

The 2SC 2527 is especially well-suited for High frequency power amplifiers, Audio power amplifiers, Switching regulators and DC-DC Converters.
A PNP complement, 2SA 1077 is available.

- High f_T = 80 MHz (typ)
- Ultra fast switching speed
- Excellent Safe Operating Area
- Improved reverse Second-Breakdown Capability
